Rapid and smart decision-making requires a holistic view of any business. Ideally, decision makers should be able to collect, analyze and act on information from all key stakeholders. Also, companies often have a massive amount of unstructured data repositories accumulated over the years, but a limited ability to transform it into meaningful and accessible information.

Effective management of data, both internal and external, facilitates better decision making and enhances profitability, with lowered risks. Business intelligence solutions, when implemented effectively, reduce the complexities involved with monitoring, measuring and transforming data and its dynamic role.

ANR aims to increase organizational efficiencies by uncluttering the complexities that surround analytical processing, data mining, business performance management, and forecasting.

ANR helps you achieve this through an architecture framework that translates business solutions into services which help drive business results through optimal utilization of processes, application, data, and content assets. Our comprehensive set of services and solutions help you become agile, efficient, and adaptable. With our immense multi-platform expertise combined with multi-domain experience, we enable smooth transformation in the following fields:

- Data Warehouse and Business Intelligence Expertise - With highly experienced and dedicated BI/DWH consultants, ANR provides prime value-added consulting services in Data Extraction, Data Modeling, Metadata Definitions, Architecture Design, Data Quality Management, Technology consolidation and Technology migration.
- BI Custom Development - ANR helps you formulate a strategy and roadmap for BI applications. The program is tailored to meet the specific needs of your business and organization, with prioritization based on market dynamics, enterprise inertia, business priorities, investment strategy, and ROI. Whatever your choice of platform, we bring to the table a wide range of expertise, thus ensuring flawless solution implementation.

Business Value: ANR's years of experience with implementing data warehouse and business intelligence (BI) solution helps provide following Business Values:

- Increase database performance
- Gain a faster path to business data and analysis
- Manage ever-increasing data warehouse growth
- Improve hardware utilization
- Simplify management and Reduce maintenance costs
- Accommodate growing numbers of concurrent users
- Lower the total cost of ownership
