Your business faces tough challenges in today's global economy. Competition is becoming more intense. You can't keep pace by simply enabling content and applications to be accessed over the Web. You have to find ways to maximize flexibility so that you can integrate existing data stores, applications and Web services that exist in heterogeneous environments and on different sides of firewalls.

eCommerce websites can provide great revenue opportunities for businesses. To be successful, the site must consistently deliver the optimal performance needed for a positive shopping experience. When managed correctly, IBM WebSphere Commerce helps enable profitable online interactions and introduces new business opportunities.

Web content portals are used to provide valuable information to customers. Delivering a quality, unified web experience is critical. Content management portals and tools help effectively manage online content and streamline internal processes. IBM WebSphere Portal is a content management solution that lowers the cost of delivering high-value portal websites and allows you to deliver a common and personalized user experience across multiple platforms.

IBM WebSphere Application Server combines features to support dynamic applications, ease of management and the latest Java 2 Platform, Enterprise Edition (J2EE) technology and Web services standards with proven scalability and performance.

ANR's team of Websphere team consists of highly skilled websphere consultants & developers with broad architectural knowledge, deep technical skills, and best practices expertise. ANR provides skills transfer, implementation, migration, architecture, design and development services, as well as customized workshops and education to fit your business needs.

With its worldwide network of services specialists, ANR's Websphere team makes it easy for clients and partners to design, build, test, and deploy Websphere solutions, helping you to become an on demand business.

**Business Value:** ANR's years of experience with implementing IBM Websphere solution helps provide following Business Values

- Tune, manage and update applications for high reliability and performance
- Monitor applications to decrease costly downtime
- Unburden over-worked internal staffs
- Get more value from your WebSphere investments
- Simplify management and Reduce maintenance costs
- Lower the total cost of ownership
