

Oracle Virtualization, UNIX and Engineered System Administration Services

Are you experiencing any of the following pain with your IT Infrastructure?

- ✓ Do you feel like you are not able to take full advantage of your IT Investment due to lack of deep Infrastructure experience?
- ✓ Are you experiencing unpredictable downtime because of improper Architecture or inefficient implementation?
- ✓ Are you experiencing serious Operating System performance issues and need help with tuning?
- ✓ Are you not able to meet your Service Level Agreements (SLA) due to unstable IT System?

ANR can help reduce your pain by identifying problems and offer solutions

ANR consultants provide System Administration services with following Operating Systems and Configurations

- ❖ Oracle Engineered Systems such as Exadata Database Machine, Oracle Database Appliance
- ❖ UNIX - Oracle Solaris, IBM AIX, HP UX
- ❖ LINUX – RedHat, Oracle Linux
- ❖ Windows – 2008, 2012
- ❖ Oracle Virtualized Machine (OVM)

ANR provides Strategic Infrastructure Planning and Architecture Solutions along with services for UNIX/LINUX System Administration, Oracle Engineered Systems and Oracle Virtual Machines (OVM) to maximize our clients ROI.

System Administration

ANR provides cost-effective UNIX, Linux, and Windows Server architecture, setup, administration, monitoring and administration services. Our deep knowledge of technology stack interdependencies allows us to make strategic recommendations regarding operating systems, administration best practices, server consolidations, storage architecture, security, and backup and recovery policies.

In addition to providing system configuration services and completing the initial set-up of your Operating System (OS) environment, ANR works with clients to define a strategic plan for carrying out the following systems maintenance tasks:

- Customized Operating System Installation and upgrades.
- Installation of OS patches.
- Operating System Security Assessment.
- Backup and Recovery.
- System monitoring and performance.
- Custom scripting and system programming.

By leveraging our System Administration Services, we help our client improve uptime and availability of your key computing platforms while reducing operating costs.

Oracle Engineered Systems and Virtualization (OVM)

Oracle Engineered Systems are hardware and software designed from scratch to work together in a seamless fashion to provide excellent performance and high availability solutions along with ease of installation, configuration, maintenance and lower cost of ownership.

ANR's team provides services for Oracle Engineered Systems – from planning, installation, configuration to monitoring and advanced support. Our consultants will ensure that the Engineered Systems are optimized for performance and high availability reducing your risk.

ANR has Oracle Virtualized Machine (OVM) Certified Specialists who have deep experience with OVM to manage Engineered Systems and also deploy OVM on bare metal servers.

We offer customizable end-to-end services for the following engineered systems:

- Oracle Exadata Database Machine
- Oracle Database Appliance
